

FEELING THE HEAT?

Many school districts in Texas are “feeling the heat” when it comes to dealing with the high cost of water. An irrigation well may be your solution.

If your school district is currently being served by a water utility, installing an irrigation well may be a more affordable option for you. An irrigation well is an efficient alternative that uses groundwater to offset the high costs of watering sports fields, landscaping, and grassed areas.

Teague Nall and Perkins’ well irrigation designs have produced substantial cost savings for several school districts in North Texas, including Keller ISD and Eagle Mountain-Saginaw ISD. Please let us know if our services may be of value to your school district. We are committed to providing responsive, timely, and quality engineering services to our clients.

BENEFITS OF INSTALLING AN IRRIGATION WELL:

- Substantial cost savings on water bills
- Quick return on investment
- Protects investment on landscaping and sports fields
- Reduces exposure to water rationing

TEAGUE NALL AND PERKINS

Teague Nall and Perkins is a civil engineering, surveying, and consulting firm that has been serving the North Texas area since 1976. With offices in Fort Worth, Dallas, and Denton, our engineers have worked with school districts across Texas on well irrigation projects. In addition to well irrigation services, we provide a full range of educational facility design services, including site evaluations, complete site engineering, athletic field design, landscape architecture, and surveying. Please contact us if you would like additional information regarding irrigation wells or any other services provided by our firm.
